

Dear FCC,

I am asking that the National Association of Broadcaster's petition 04-160 be rejected. I am a 2 plus year member of xm. XM just added the traffic channels and I find them of much more use than the 15 second blips the standard radi channels provide. They cover many cities and are on 24/7. I support the format that XM radio is providing and have long waited for the standard channels to do what XM has successful done. This includes the traffic and weather channels. If the association wouldn't have waited around and developed their own quality reporting perhaps they would have a valid arguement. To just crush a fair competitor, who is doing it better, is unfair and unjust.

Please reject their petetion and allow me, the consumer, to PAY for what I want. As a paying customer I can make my own choices.
